

Automatic Nesting for *SpaceClaim*

Aptia Solutions has developed a plugin to the SpaceClaim application which enables users to use Aptia's powerful automatic nesting technology within the SpaceClaim environment.

Simply develop your components and switch to the nesting tab to automatically generate efficient nests of your parts for design refinement, quotation or production purposes.

The plugin adds Aptia's nesting toolbar to your application. This allows you to design *and* nest your parts inside SpaceClaim without any cumbersome and time consuming export and import steps.

Simply set sheet dimensions and other options as you require, click the nest button when your parts are ready and Aptia's powerful nesting engine will search for high quality nests. One more click arranges the parts in the efficient layout found by the nesting engine in the SpaceClaim workspace.
